Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/05/14 at 03:00 PM

Group Number: 1513612

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m³	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/16/14 at 10:55 AM

Group Number: 1513295

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m3	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>25\%$	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA <0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

10726	N-Nitrosodiphenylamine	86-30-6	22	U 22	45	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.

General Sample Comments

State of North Carolina Lab Certification No. 521

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/12/14 at 04:32 PM

Group Number: 1515131

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

3,3'-Dichlorobenzidine	100 U	100.	330	ug/kg	90		10-125		

*- Outside of specification

** - This limit was used in the evaluation of the final result for the blank

- (1) The result for one or both determinations was less than five times the LOQ.
- (2) The unspiked result was more than four times the spike added.

*- Outside of specification

** - This limit was used in the evaluation of the final result for the blank

(1) The result for one or both determinations was less than five times the LOQ.

(2) The unspiked result was more than four times the spike added.

Thermometer Types: DT = Digital (Temp. Bottle) IR = Infrared (Surface Temp) All Temperatures in °C.

Cooler #	Thermometer ID	Corrected Temp	Therm. Type	Ice Type	Ice Present?	Ice Container	Elevated Temp?
1	DT121	0.9	DT	Wet	Y	Loose	N
2	DT121	0.2	DT	Wet	Y	Loose	N
3	DT121	0.2	DT	Wet	Y	Loose	N
4	DT121	0.4	DT	Wet	Y	Loose	N

Samples Not Intact Details: SED SW PW 2014

Sample ID on Label	Bottle Code	Bottle Quantity	Container Salvageable?	Comments
SSP14-SED-05	40 ml glass vial - MeOH	1	N	SOIL VIALS WERE NOT IN FOAM HOLDERS.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m3	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/07/14 at 06:47 PM

Group Number: 1514779

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

SED SW PW 2014

Delivery and Receipt Information

Delivery Method:	<u>Fed Ex</u>	Arrival Timestamp:	<u>10/30/2014 9:15</u>
Number of Packages:	<u>1</u>	Number of Projects:	<u>1</u>
State/Province of Origin:	<u>NC</u>		

Arrival Condition Summary

Shipping Container Sealed:	Yes	Sample IDs on COC match Containers:	Yes
Custody Seal Present:	Yes	Sample Date/Times match COC:	Yes
Custody Seal Intact:	Yes	VOA Vial Headspace ≥ 6mm:	No
Samples Chilled:	Yes	Total Trip Blank Qty:	6
Paperwork Enclosed:	Yes	Trip Blank Type:	See Below
Samples Intact:	Yes	Air Quality Samples Present:	No
Missing Samples:	No		
Extra Samples:	No		
Discrepancy in Container Qty on COC:	No		

Trip Blank Type(s): 4 HCL, 2 UNPRESERVED

Unpacked by Corey Eshleman (3647) at 09:54 on 10/30/2014

Samples Chilled Details: SED SW PW 2014

Thermometer Types: DT = Digital (Temp. Bottle) IR = Infrared (Surface Temp) All Temperatures in °C.

Cooler #	Thermometer ID	Corrected Temp	Therm. Type	Ice Type	Ice Present?	Ice Container	Elevated Temp?
1	DT121	0.5	DT	Wet	Y	Loose	N

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m³	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/07/14 at 09:11 AM

Group Number: 1514400

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m³	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/06/14 at 11:27 AM

Group Number: 1514577

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/15/14 at 10:40 AM

Group Number: 1515222

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m3	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 10/31/14 at 11:45 AM

Group Number: 1513608

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m³	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

REVISED

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/19/14 at 08:43 AM

Group Number: 1514575

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Samples Chilled Details

Thermometer Types: DT = Digital (Temp. Bottle) IR = Infrared (Surface Temp) All Temperatures in °C.

Cooler #	Thermometer ID	Corrected Temp	Therm. Type	Ice Type	Ice Present?	Ice Container	Elevated Temp?
1	DT121	1.0	DT	Wet	Y	Loose	N
2	DT121	0.5	DT	Wet	Y	Loose/Bag	N

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m3	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/12/14 at 12:58 PM

Group Number: 1515172

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m3	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>25\%$	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA <0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

APPENDIX C
SITE-SPECIFIC REMEDIAL LEVELS DOCUMENT

NC DENR Comments dated August 21, 2014 – Draft for Discussion

General DuPont Comment:	
<p><i>This response to comments includes a response to NCDENR’s comments dated August 21, 2014 on the Draft Site-Specific Remedial Levels Report and incorporates a response to verbal comments received by the agency during a conference call on August 22, 2014 (see Comments 8 and 9). Revisions to the report are indicated with red underline text.</i></p>	
Comment	Response
<p>1. The exposure assumptions for the direct contact pathways for soil are all acceptable. All pathways currently evaluated assume that the rangers or visitors at the park will only come into contact with the contaminated surface soil only a quarter of the time they are on the property. Is this area going to be capped, posted or clearly identified on the plat map for the land use restriction? Would future developments of offices or trails in the contaminated area be prohibited? I think we need to discuss all potential uses for the site in discussing this comment. We need to make sure all parties understand the potential uses of the site and the restrictions that will be in place.</p>	<p>As discussed with NC DENR during a meeting on April 11, 2014, DuPont intends to minimize/eliminate potential for future exposure through the implementation of the following institutional controls (ICs): soil use/excavation management plan; vapor intrusion protection plan; groundwater use and restrictions plan; appropriate long-term O&M plan; and, deed notices/restrictions. Engineering controls are also planned to control/isolate waste materials which may remain in place. DuPont will work closely with the NC Department of Agriculture and North Carolina National Guard (NCNG) and DuPont State Recreational Forest staff (DSRF) to identify areas of the site where re-development (intrusive activity or placement of structures) will be restricted or where engineering controls would be required for any new construction. Section 4 (Site Conceptual Model) of the report has been revised to include this language.</p>
<p>2. Include a trespasser scenario where the individual spent significant time in the contaminated areas.</p>	<p>As discussed during our conference call on August 22, 2014, since future land use would be unrestricted, an evaluation of a trespasser scenario is not considered applicable. Supporting rationale has been added to Section 5.3.1 (Potential Receptors) of the report.</p>
<p>3. The Division assumes additivity of risk for contaminants that adversely affect the same target organ or exhibit the same critical effect. The acceptable target hazard index (sum of hazard quotients) is one. The hazard quotient used to calculate the alternative remediation levels in this document is 1. This assumes no additivity. Change target hazard quotient to reflect either number of contaminants with non-carcinogenic effects or consider target organ/critical effect.</p>	<p>The attached Table 1 provides a comparison of the maximum detected concentration for constituents of potential concern (COPCs) with non-carcinogenic effects in site surface soil to the lowest remedial level calculated based on a hazard quotient (HQ) of 1. As shown in the table, while the total hazard index (HI) is 1.4, the total HI by target organ is less than 1. A similar result was observed for subsurface soil. While the total HI was 1.6, the total HI by target organ did not exceed 1. Therefore, an adjustment to the HQ in the RL calculation is not necessary.</p>
<p>4. Since this is going to be a public facility there will probably be a few enclosed structures built in the future. There are chlorinated solvents in groundwater. Will there be restrictions on building structures above groundwater plume? Please provide rationale why vapor intrusion pathway is not complete and therefore not evaluated in the narrative.</p>	<p>As noted in the response to Comment 1, DuPont will develop a vapor intrusion protection plan. This plan will identify areas of the site where future construction will require vapor mitigation measures. This language has been added to Section 4 of the report.</p>
<p>5. Sediment samples must be collected both in DERA Creek and Little River. If contaminants are detected ecological risk must be evaluated. Surface Water at DERA Creek has to meet class C and trout water standards like little river.</p>	<p>Consistent with the Final Remedial Investigation Work Plan dated August 1, 2014, surface water and sediment were collected in both Lake DERA and DERA Creek during the sampling event conducted in October/November 2014. An evaluation of the data will be conducted consistent with the approach presented in the NCDENR approved Work Plan.</p>

Comment	Response
<p>6. The site conceptual model does identify surface water pathway as complete. Provide in the narrative characteristics of DERA Creek at the site like dimensions, flow and fish and aquatic life population. Would visitors fish or wade in DERA Creek? Provide similar analysis for the on-site lake in the narrative. I assume surface water pathway will be addressed in detail in future editions once additional sampling is complete. I would imagine that comments 5 and 6 will be the most important part of our discussion Friday. In Section 5.1 of the SSRLs, DuPont proposes a simple dilution calculation with the Little River as the discharge point. Based on the comment above, DWM considers DERA Creek (and Lake DERA also) as a receptor for discharge of contaminated groundwater. Calculations demonstrating protection of receptors must consider DERA Creek. Obviously this will affect the site specific levels calculated for each environmental media.</p>	<p>Additional discussion of DERA Creek and Lake DERA characteristics has been added to Section 3 (Site Environmental Setting) of the report. As noted in Section 5 of the report, site-specific RLs were not presented for surface water and sediment, but may be developed later for protection of human and ecological receptors based on the results of the final phase of the RFI. Surface water and sediment were not identified as media of concern during prior investigations.</p> <p>Based on the hydrogeologic SCM developed for the site, the overall flow pattern within the surficial aquifer across the Site is in an east to southeasterly direction (Figures 7 and 8). Surficial groundwater also appears to flow radially from the bedrock mound beneath the SWMU 17 area. In addition, the potentiometric surface indicates that a mounding occurs at Lake DERA and groundwater flows away from the lake also towards Little River. As a result, the majority of site shallow groundwater flows towards the Little River. Only a small portion of shallow groundwater at the site may potentially discharge to DERA Creek. Moving from west to east, groundwater flow is parallel to the Creek and does not intersect or move toward the creek until near SWMU 12A. Well clusters MW-206A/B, 224A/B, and 209 A/B all likely monitor groundwater that may have some influence on water quality of the creek. Therefore, an evaluation of groundwater release to DERA Creek was performed in order to determine whether concentrations of constituents detected in these groundwater monitoring wells are likely to result in exceedances of relevant surface-water quality criteria in the creek. Consistent with the evaluations conducted to support the positive EI CA750 determination for the site, maximum detected concentrations in these groundwater monitoring wells were compared to the surface water screening criteria with an applied conservative dilution factor of 10 to account for groundwater to surface water interaction. As shown in Table 2, only one constituent, barium, had a maximum detected concentration which exceeded the adjusted groundwater-to-surface water screening criteria. However, the average concentration was less than the adjusted groundwater-to-surface water screening criteria. In addition, barium has not been detected in DERA Creek surface water samples. As a result, potential groundwater discharge to surface water of DERA Creek is considered acceptable. Since DERA Creek flows into Little River, Little River is considered the ultimate receptor of site groundwater discharge and the most appropriate point for ACL derivation.</p> <p>Section 5.1 has been revised to provide additional discussion regarding the attenuation factor (AF) calculation and assumptions regarding discharge</p>
<p>7. I tried to follow protection of groundwater (surface water) value calculation for soil. Based on the equation on table 10 the Cw is the ACL x 20. I assumed this was the ACL from table 5. I did not come up with the same Cw. Please clarify.</p>	<p>An error was noted in Table 10. This error has been corrected and a revised table is included. As indicated in the revised table, RLs for protection of migration to groundwater have increased due to the correction. The revised RLs were also updated in Table 11.</p>

Comment	Response
8. Verbal Comment: Clearly articulate how the scenarios compare.	Section 5.3.1 has been revised to provide additional information regarding the potential receptors and planned future land uses. As previously discussed in Section 5.3.4, one exceedance of site-specific RLs was observed at one unit (AOC A). No other exceedances were noted.
9. Verbal Comment: Discuss how and where the site will be used for Wounded Warrior Rehab.	Section 5.3.1 has been revised to address future land use plans for Wounded Warrior rehab. DuPont's current understanding is that Lake DERA would be used to provide primitive camping and recreational opportunities for Wounded Warriors. Camping would be conducted at the existing Lake DERA campground. No SWMUs or AOCs are located on this side of Lake DERA. In addition, Lake DERA surface water and sediment were not identified as media of concern during prior investigations. As a result, no complete exposure pathways have been identified for this receptor. This will be confirmed based on the results of the final phase of the RFI.

1 - North Carolina Surface Water Standards found in 15A NCAC 02B.0208 for protection of human health (organism only)

DERA Creek is a Class C water and is not used as a water supply.

In the absence of fish consumption values, the following secondary screening levels were utilized:

DuPont -Where NC 2B for HH-org were unavailable, then a surface water standard (SS) was derived consistent with 15A NCAC 02B.0208 for protection of human health (fish consumption).

MCL - Federal Maximum Contaminant Levels (Summer 2010)

NC 2L - North Carolina 2L Drinking Water Standard 15A NCAC 2L (April 2013)

NC IMAC - North Carolina Interim Maximum Allowable Concentration (April 2013)

2 - North Carolina Surface Water Standards found in 15A NCAC 02B.0208 for protection of aquatic life and trout waters

In the absence of chronic values, the following ecological surface water benchmarks were utilized:

Tier II Secondary Chronic Value (SCV) - Suter, G.W. II, and Tsao, C.L. 1996. Toxicological Benchmarks for Screening Potential Contaminants of Concern for Effects on Aquatic Biota

EPA Region III - Freshwater Ecological Screening Benchmark

EPA Region V - Surface Water Ecological Screening Level

NAWQC - National Recommended Water Quality Criteria (2009) for protection of aquatic life (freshwater chronic).

DuPont - DuPont-derived effects threshold concentration

Executive Summary

This report describes the development of site-specific soil and groundwater remedial levels (RLs) for the Former E. I. du Pont de Nemours and Company (DuPont) Brevard Facility (the site) located in Cedar Mountain, North Carolina. The site is no longer used for manufacturing operations and has been dismantled. Planned future use of the site includes military training and recreational uses consistent with land use plans identified by the NC Department of Agriculture and North Carolina National Guard (NCNG) and DuPont State Recreational Forest staff (DSRF).

Corrective action at the site is currently being conducted in accordance with requirements set forth in the Hazardous Waste Management Permit No. No. NCD003152329-R-2 issued by the North Carolina Department of Environment and Natural Resources (NCDENR) on August 4, 2008 and revised on April 11, 2011. In accordance with the Permit, DuPont is required to conduct RCRA Facility Investigation (RFI) activities at the site to address confirmed or suspected releases to the environment from RCRA solid waste management units (SWMUs) and/or areas of concern (AOCs). Since 2002, DuPont has completed three phases of the RFI. The final phase of the RFI began in the Fall 2014.

Consistent with the NCDENR February 27, 2014 document entitled “Establishing Remediation Goals for the DuPont Brevard Facility”, site-specific RLs for groundwater and soil were developed for the protection of human health and the environment based on planned future uses as proposed by the DSRF and the NCNG. These RLs will be used to support the remedial approach for the site.

As part of the RFI, a site conceptual model (SCM) was developed to address potential human and ecological exposure pathways. In developing these site-specific RLs, receptors and routes of exposure were refined based on the currently proposed uses. Constituents of potential concern (COPCs) were identified based on comparison of existing RFI data against screening levels for appropriate media and exposure pathways. As a result, RLs are presented in this report for the following:

- ❑ Groundwater concentrations protective of receptors in Little River (human and ecological)
- ❑ Soil concentrations protective of potential groundwater receptors (Little River)
- ❑ Direct contact soil concentrations protective of potential future land use scenarios (i.e., military and recreational) and the following receptors: Forest Ranger, National Guard, Utility Worker and Trail User (Adult/Child)

Additional sampling activities are planned during the final phase of the RFI. These RLs will be used to evaluate the data collected during the investigation and provide information to support remedial-decision making based on planned future land uses.

Site-specific RLs are not presented in this report for surface water and sediment because there are no exceedances of appropriate screening levels currently. Hence, no COPCs have been identified. RLs for these media may be developed for protection of human and ecological receptors based on the results of the final phase of the RFI.

1.0 Introduction

This report describes the development of site-specific remedial levels (RLs) for the Former E. I. du Pont de Nemours and Company (DuPont) Brevard Facility (the site) located in Cedar Mountain, North Carolina. The RLs will be used to support the remedial approach for the site.

The following RLs are presented in this report:

- ❑ Groundwater concentrations protective of receptors in Little River (human and ecological)
- ❑ Soil concentrations protective of potential groundwater receptors (Little River)
- ❑ Direct contact soil concentrations protective of potential future land use scenarios

These RLs have been derived for the protection of human health and the environment based on planned future uses. Receptors and exposure routes addressed in the RLs are based on the use of a site conceptual model (SCM). The SCM has been developed to address potential ecological and human exposure pathways for the site and has been used to guide the development of the RLs.

1.1 Report Organization

The remainder of this report is organized into the following sections:

- ❑ Section 2 provides a brief description of the site operational history and corrective action background
- ❑ Section 3 details the site environmental setting
- ❑ Section 4 presents the current Site Conceptual Model (SCM)
- ❑ Section 5 provides the technical approach for RL calculations
- ❑ Section 6 summarizes the site-specific RLs for soil and groundwater
- ❑ Section 7 provides the references that were used in the development of this report

Tables, figures and appendices referenced herein are attached to the end of this document. Appendix A provides the future land use plans for the site. Appendix B details groundwater flows calculated for site groundwater and for the Little River. Appendix C contains site-specific RL calculations for soil direct contact.

2.0 Brief Site History and Background

The site began operations under DuPont in 1957 and was operated by the Chemicals and Pigments (C&P) Department during the first five years of operation, producing high purity silicon. The property was then transferred to the Imaging Department, for production of medical imaging (x-ray) films. In addition to manufacturing processes, DuPont historically operated a powerhouse, a wastewater treatment facility, a Save-All System (silver recovery unit), the Alternate Fuel Boiler (AFB), and permitted solid waste landfills.

The manufacturing area was divested to Sterling Diagnostic Imaging Inc. (Sterling) on March 29, 1996. On May 14, 1999, Sterling divested the manufacturing facility to AGFA Corporation. Both AGFA and Sterling conducted the same operations as DuPont. AGFA discontinued operations at the DuPont Brevard Facility in December 2002. An agreement was reached with AGFA to perform demolition and removal (D&R) activities for major assets of the facility (February 2004) prior to DuPont reacquisition of the property. Completion of all required D&R activities was completed in May 2006 and ownership of the site was divested to DuPont (July 2006).

Corrective action at the site is currently being conducted in accordance with requirements set forth in the Hazardous Waste Management Permit No. No. NCD003152329-R-2 issued by the North Carolina Department of Environment and Natural Resources (NCDENR) on August 4, 2008 and revised on April 11, 2011. Consistent with the Permit, DuPont is required to conduct RCRA Facility Investigation (RFI) activities at the site to address confirmed or suspected releases to the environment from RCRA solid waste management units (SWMUs) and/or areas of concern (AOCs). Since 2002, DuPont has completed three phases of the RFI. Results of these investigations are documented in the following reports:

- ❑ DuPont CRG, 2003. *Phase I RFI Report*
- ❑ DuPont CRG, 2004. *Phase II RFI Report*
- ❑ DuPont CRG, 2008. *Interim Phase III RFI Report*

3.0 Site Environmental Setting

The site is located approximately six miles southeast of the town of Brevard, near Cedar Mountain, in Transylvania County, North Carolina, in the Blue Ridge Physiographic Province Region of the Appalachian Mountains. The Blue Ridge Physiographic Province is characterized by mountainous terrain with relatively high relief. Local elevations range from 1,010 to 4,000 feet above mean sea level (MSL). The manufacturing facility is situated on a fairly level plateau at 2,550 feet above MSL and is located on 79.41 acres. The site is bounded by the Little River on the south and east, and heavily wooded mountain land to the north.

During the RFI, two aquifers have been identified and characterized at the site: surficial and bedrock. Generally, the surficial aquifer consists of subsurface overburden materials (soils) and residuum materials [unconsolidated saprolite and partially weathered rock (PWR)] that overlay crystalline bedrock composed of granite and gneiss. The thickness of the surficial aquifer (residuum combined with the overburden) can be correlated to the relief of the underlying bedrock outcrop (Parsons, 2009).

Groundwater occurrence within the surficial aquifer is based on observations made during the collection of the lithologic borings installed as part of the piezometer and monitoring well installations completed during the RFI field investigations. In the majority of the site, groundwater in the surficial aquifer was observed as the borings were advanced into the saprolitic materials. In areas adjacent to the river (such as MW-106, MW-107, and MW-213 through MW-215), groundwater is present in shallow [i.e., 5 feet below ground surface (bgs) to 10 feet bgs] overburden/overbank materials in addition to the saprolite and PWR. Depths to PWR along the river are estimated to range from 15 feet bgs to 40 feet bgs.

In the western portion of the site (west of the former manufacturing areas) groundwater flow is predominantly downward from the surficial aquifer to the bedrock aquifer. While in the eastern half of the site groundwater flow is predominately upward from deep soil/bedrock to surficial aquifer. As a result, the direction of gradient flow tends to be upward in areas where groundwater is being discharged to the surface and downward where recharge is believed to occur. In the case of the site, the topographical highs tend to be on the western half of the site, and are the most likely sources of recharge, whereas the eastern half of the site is topographically lower, and is more likely to have locations of discharge (Parsons, 2009).

Based on the hydrogeologic SCM developed for the site, the surficial aquifer is in communication with the Little River. The Little River flows from the south to north across the site and may receive discharge for the overburden/over-bank portion of the surficial aquifer. Overall flow in the surficial aquifer at the Site flows in an east to southeasterly direction towards the Little River. Flow patterns have been observed to move in a manner that follows bedrock topography. Horizontal gradients are noted to be the steepest in areas where bedrock topography is greatest and lowest where the topography begins to level off in the presence of the Little River (Parsons, 2009).

Groundwater flow within the bedrock aquifer is also to the east/southeast towards the Little River. However, direct communication between the bedrock aquifer and the river is

limited to the extent of the river between High Falls and Hooker Falls where the residuum thins and bedrock outcrops have been observed. The bedrock aquifer does not appear to be in direct communication with the extent of the river between Bridal Veil Falls to High Falls [see Figures 12- 20 and Appendix A in the *Phase III RFI Report* (Parsons, 2009)].

The Little River is classified by NCDENR as Class C fresh surface water (aquatic propagation and survival, fishing, wildlife, secondary recreation, and agricultural use). In addition, the Little River has a supplemental classification of Class TR (Trout Waters - intended to protect freshwaters for natural trout propagation and survival of stocked trout).

Additional surface water features at the site include Lake DERA and DERA Creek. Lake DERA, also known as Lake DuPont, is an approximate 19-acre lake located in the northwest of the former manufacturing area. The lake features a silty bottom, with limited amounts of submerged aquatic vegetation (SAV) along its shallower reaches. An assessment of Lake DERA was conducted by the North Carolina Wildlife Resources Commission on August 10, 2010. The assessment consisted of a snorkel survey and use of a YSI® Pro20 to develop a temperature and dissolved oxygen profile of the lake. The snorkel survey revealed that the northern portion of the lake is shallow and contains some emergent vegetation which serves as habitat for young-of-the- year and adult littoral fish species. Overall, fish density and diversity were low; three fish species were observed: largemouth bass (*Micropterus salmoides*), bluegill (*Lepomis macrochirus*), and redbreast sunfish (*Lepomis auritus*). YSI® measurements confirmed that the relatively shallow Lake is fully mixed by wind and has adequate dissolved oxygen levels throughout the water column. Consequently, the ecological quality of Lake DERA is considered moderate due to limited aquatic vegetation and a low diversity of aquatic life (URS, 2011).

DERA Creek flows from west to east (Lake DERA to Little River) through the Site, and has year-round flow. During an ecological assessment of the site conducted in 2011, bluegill and bass were observed in the outfall pool, just east of the Lake DERA dam; however, sediments in this area were notably marked by iron flocculant (URS, 2011). Swamp Forest-Bog and Acidic Cove Forest were found to occur along the creek, limiting access. In addition, the creek is too shallow for swimming, canoeing or rafting.

4.0 Site Conceptual Model

During the RFI process, DuPont has strived to incorporate information from individual SWMUs and AOCs, along with more general site data, into a facility-wide SCM. The use of a SCM provides a means of documenting and periodically updating general facility information and data regarding potential releases to the environment (USEPA, Regional VI, 2008). The SCM also provides a framework for problem definition; aids in the identification of data gaps which can then be addressed in the investigation; and assists in the identification of appropriate remedial technologies, if necessary.

The SCM for the Former DuPont Brevard Facility was developed and designed to assess the relative potential for the site to impact human health and the environment and to facilitate the identification of data gaps that would aid in the assessment. The assessment is based on an integrated analysis of potential exposure pathways, hazardous substance release constituent concentrations, environmental fate and transport mechanisms, and risk to human health and the environment.

The SCM is dynamic and should be tested and refined from its original state as information, collected in a phased approach, is fed into it. Consequently in support of this report, the conceptual exposure model (CEM) component that has been presented in previous reports was updated. The CEM, included as Figure 1 to this report, depicts exposure pathways by which potential human and ecological receptors may be exposed to constituents in environmental media at the site under reasonably anticipated future land- and water-use conditions.

The CEM was developed with the following considerations:

- ❑ The site is no longer used for manufacturing operations and has been dismantled. Planned future use of the site include military training and recreational uses consistent with land use plans identified by the NC Department of Agriculture and North Carolina National Guard (NCNG) and DuPont State Recreational Forest staff (DSRF). Specifically,:
 - NCNG Military Training with lodging and administration facilities
 - Forest Ranger Office
 - Parking for surrounding DuPont State Recreational Forest
 - Managed recreation center at Lake DERA for Wounded Warrior REHAB, including primitive camping, water recreation and designated fishing areas
 - Multi-Use Trail in Nature Preserve Primary Area
- ❑ The majority of SWMU/AOC boundaries have been defined and their wastes characterized. Some units have been proposed for additional investigation as part of the final phase of the RFI to facilitate remedial decisions.
- ❑ Releases in soil (surface and subsurface) and groundwater have been identified.
- ❑ Potential migration pathways of constituents of potential concern (COPCs) identified in environmental media at the site include:

- Surface runoff during rain events into drainage ditches and storm sewers (historically before site dismantlement);
 - Airborne transport of particulates generated by wind erosion and physical disturbance of soil (surface and subsurface) in SWMUs or AOCs to downwind locations;
 - Leaching of constituents in soil (surface and subsurface) to shallow groundwater;
 - Volatilization of constituents in shallow groundwater into indoor air; and,
 - Migration of dissolved constituents in shallow groundwater beneath the site vertically to the deeper bedrock aquifer and horizontally to downgradient locations, including the Little River.
-
- Under current conditions, vapor intrusion pathways are incomplete. No occupied structures are located near volatile constituents in the subsurface.
 - DuPont will work closely with the NCNG and DSRF to identify areas of the site where re-development (intrusive activity or placement of structures) will be restricted or where engineering controls would be required for any new construction.
 - Currently, wooded areas and surface water bodies¹ adjacent to the site are popular recreational locations for the surrounding community.
 - Location and recreational activities associated with the Wounded Warrior REHAB program will take remaining site conditions into account.
 - Groundwater in the surficial aquifer is not currently used on or in the immediate vicinity of the site as drinking water. Deed restrictions would prohibit its use on-site as drinking water in the future.
 - Groundwater in the bedrock aquifer is currently used on-site for sanitary purposes and is used at the NCDSFS Visitor Center for potable and sanitary uses. An interim remedial measure (IRM) has been completed at the visitor center bedrock well.

¹ If the site is transferred to the State of North Carolina, then the Little River and NCDSFS Visitor Center would be within the site boundary.

5.0 Remedial Level Approach

Consistent with NCDENR February 27, 2014 document entitled “Establishing Remediation Goals for the DuPont Brevard Facility”, site-specific RLs for groundwater and soil were developed for the protection of human health and the environment based on planned future uses. Site-specific RLs are not presented in this report for surface water and sediment, but may be developed later for protection of human and ecological receptors based on the results of the final phase of the RFI.

As presented to DuPont on February 28, 2014 by the NC Department of Agriculture and NCNG, the DSRF has developed a preliminary map of possible uses of the DuPont property that could be compatible with both State Forest use and the proposed uses of the NCNG (see Appendix A). These possible uses include the following:

- NCNG Military Training
- Forest Ranger Office
- Parking for surrounding DuPont State Recreational Forest
- Managed recreation center at Lake DERA
- Multi-Use Trail in Nature Preserve Primary Area

5.1 Site-Specific Groundwater Remedial Levels

Under current conditions, groundwater is not used on-site for drinking water purposes and future use will be prohibited as part of a Groundwater Use and Restrictions Plan. Residential users of shallow groundwater have not been identified downgradient of the site. Furthermore, the downgradient Little River is not used for water supply purposes. However, shallow groundwater may discharge to DERA Creek and the Little River. The majority of site shallow groundwater may discharge to the Little River. However, a portion of shallow groundwater may also discharge to DERA Creek. Since DERA Creek flows into Little River, Little River is considered the ultimate receptor of site groundwater discharge.

Downgradient users of deep groundwater in the immediate vicinity of the site are limited to the NCDSFS Visitor Center (which has a water treatment unit installed). The drinking water source for municipal groundwater in the surrounding area is Cathey’s Creek, Bradley Creek or the North Fork of the Mills River, each of which is over 5 miles from the site.

Therefore, and consistent with NCDENR’s *Guidelines for Establishing Remediation Goals at RCRA Hazardous Waste Sites* (HWS Guidance), groundwater remedial levels [hereafter referred to as alternate concentration limits (ACLs)] were calculated to be protective of potential human and ecological receptors in the Little River. COPCs identified for ACL derivation were selected based on a comparison to North Carolina groundwater standards established in 15A NCAC 2L .0200 (NC2L standards) or NC Interim Maximum Allowable Concentrations (IMACs). The data set evaluated included groundwater samples collected between 2007 and 2013 at 77 monitoring well locations and six water supply wells (WSW) during the most recent RFI monitoring events and

semi-annual CAMU groundwater monitoring. Tables 1 – 3 identify COPCs for the surficial aquifer, bedrock aquifer and water supply wells.

The approach for the ACL derivation was to essentially run groundwater mass flux calculations backwards to establish an ACL at the point of compliance (POC) considering an initial risk-based concentration in the Little River (the point of exposure [or POE]). First, acceptable levels protective of human health or aquatic life (such as NC 2B values) were identified for the POE. Second, an attenuation factor (AF) based on dilution into the receiving water body was calculated. Inputs to the AF are detailed in Appendix B.

$$AF = \frac{Q_r \times F \times 86,400 \text{ sec/day}}{Q_a}$$

Where:

Q_a = Flow in aquifer (cf/day)

Q_r = Flow in river (cf/sec) (either the harmonic mean or 7Q10)

F = Mixing fraction of river (unitless)

The ACL was then determined by multiplying the risk-based POE value by the site-specific AF.

Acceptable levels protective of human health or aquatic life were based on the lower of the 15A NCAC 2B (NC2B standards) for protection of freshwater organisms (chronic), protection of trout waters and protection of human health (organism only). Where these values were not available, the following secondary screening levels were used in the derivation.

Receptor	Primary Screening Level	Secondary Screening Level	
<i>Protection of Human Health</i>	15A NCAC 2B (Human Health)	NC IMAC or Federal MCL	DuPont-derived screening level protective of fish consumption (see Table 4)
<i>Protection of Aquatic Life</i>	15A NCAC 2B (Freshwater Aquatic Life) or 15A NCAC 2B (Trout Waters)	USEPA Tier II freshwater secondary chronic values (SCV) (Suter and Taos, 1996)	National Recommended Ambient Water Quality Criteria (NAWQC) or USEPA Region V Ecological Screening Level

Risk-based POE values are tabulated in Table 5.

As detailed in Appendix B, the total contribution of site groundwater to the Little River is significantly less than 1 cubic feet per second (cfs) (0.027 cfs). Data provided by the USGS indicates that flow in the Little River near the site ranges between 15 cfs and 63 cfs based on years from 1962 – 1991 (see Appendix B). Therefore, it is anticipated that constituents present in the groundwater under the site entering surface water in the Little River would be diluted by a factor of at least 558. To account for variable flow within the groundwater and surface water systems a dilution factor of 500 was assumed as the AF.

In the AF calculation, groundwater was assumed to mix completely in the river flow (total discharge), assuming a groundwater flow divide down the center of the river bottom. A lower mixing fraction (such as 0.33), which is consistent with NCDENR guidance under the National Pollutant Discharge Elimination System (NPDES) program, would be considered to be more appropriate for the present evaluation because

groundwater is released through a porous medium over a large portion of the riverbank and bottom. However, the lower mixing fraction would result in a higher and less conservative AF.

Table 5 tabulates ACL calculations for each groundwater COPC identified in site groundwater. As indicated in the table, if the calculated ACL exceeded water solubility limits for organic groundwater constituents, then the ACL was established at the water solubility limit. These ACLs are considered conservative because other attenuation mechanisms such as degradation, dispersion or adsorption were not considered in the calculation.

Table 5 also includes a comparison of concentrations measured at the POC (i.e., monitoring wells adjacent to the Little River). As indicated in the table, maximum detected concentrations in these locations were well less than the ACLs.

To further evaluate the groundwater-to-surface water pathway, samples have been collected from DERA Creek and the Little River as part of the site NPDES program, 1995 Environmental Site Assessment (ESA) and RFI investigations. During the most recent Phase III RFI (2009), four surface-water samples were collected from Little River (SW-4 – SW-7), three surface-water samples were collected from DERA Creek (SW-8 – SW-10) and two samples were collected below High Falls (SW-12 and SW-13). Additional sampling of Little River has also been conducted semi-annually since 2012 as part of CAMU groundwater monitoring.

A comparison of the analytical results to applicable surface water screening criteria is provided in Table 6. As detailed in Table 6, of the 23 COPCs identified in groundwater, only two organics (cis-1,2-dichloroethene and vinyl chloride) and five inorganics (total chromium, iron, lead, manganese and vanadium) were detected in the surface water samples. Only total manganese was detected just above generic screening criteria in DERA Creek protective of potential ecological receptors. However, none of the constituents were detected in Little River surface water above the screening criteria.

Additional surface water sampling is planned as part of the final phase of the RFI. Sediment sampling is also planned. As noted earlier, site-specific RLs are not presented in this report for surface water and sediment, but may be developed later based on the results of the RFI sampling.

5.2 Site-Specific Soil RLs Protective of Soil Migration to Groundwater

Soil migration-to-groundwater RLs were calculated using the soil screening level (SSL) equation provided as Figure 1 in the HWS guidance. COPCs identified for the RLs were based on comparison to NC DENR Inactive Hazardous Site Branch (IHSB) Preliminary Soil Remediation Goals (PSRGs) for Protection of Groundwater (January 2014 version) (see Tables 7 and 8). In addition, constituent concentrations in soil and groundwater were used to determine whether a unit was a potential contamination source to groundwater. A summary of the COPCs is provided in Table 9. The RL calculations, which are presented in Table 10, used NC DENR-recommended soil parameter inputs with the ACLs derived above as the target groundwater concentration.

Protection of soil migration to groundwater RLs are intended to serve as comparison levels for surface and subsurface soil to evaluate remedial action on the basis of groundwater migration to the Little River. Table 11 provides a comparison of constituents detected in soil during the RFI to the calculated RLs. Based on a review of the data set and as indicated in the table:

- ❑ Exceedances in soil samples were observed in less than 10% of the RFI soil samples collected.
- ❑ Most exceedances in waste samples were observed at SWMUs 13 and 16, which are over 900 feet from the Little River.
- ❑ None of the COPCs have been detected in groundwater above 10 times the NC 2B at POC monitoring wells.
- ❑ None of the COPCs have been detected in Little River or DERA Creek² surface water.

Based on these observations, potential impact of these constituents from the migration to groundwater route to potential receptors in surface water is not expected.

5.3 Site-Specific Soil RLs Protective of Human Health (Direct Contact Exposure Pathways)

Direct Contact RLs are intended to serve as evaluation criteria for surface and subsurface soil to evaluate remedial action on the basis of human health exposure.

RLs values protective of multiple-route exposure were calculated using USEPA risk assessment methodology (USEPA, 1989). The USEPA risk assessment equations calculate risk levels based on the constituent concentration, magnitude of exposure, and the toxicity of the constituent. To calculate the RLs, the equations are rearranged to solve for an allowable constituent concentration based on a target risk level (hazard quotient of 1 or cancer risk of 10^{-6}), magnitude of exposure, and toxicity.

The following sections describe the potential receptors, exposure assumptions and toxicity values used in the RL derivation. COPCs for human health direct contact exposure pathways were identified based on a comparison to IHSB PSRGs for Residential Land Use (January 2014 version). The data set evaluated included surface soil (from intervals between 0 and 2 ft bgs)³ and subsurface soil samples (from discrete intervals between 2 and 15 ft bgs) collected from 88 soil boring locations during the ESA and RFI. A summary of the surface soil and subsurface soil COPCs are provided in Tables 7 and 8, respectively.

For adult receptors, RLs were calculated to be protective of potential carcinogenic and non-carcinogenic (systemic) effects. However, consistent with EPA guidance, for exposures which involved adult and child receptors, potential systemic effects (or non-cancerous health hazards) were evaluated for young children (age 0 to 6 years) while

² DERA Creek COPCs for soil-to-groundwater migration are limited to Dowtherm constituents observed in one SWMU 18 boring.

³ Soil or waste samples with start depths less than two feet (i.e., collected from 1 to 5 ft bgs) were conservatively included in the surface soil data set.

potential carcinogenic effects (or excess cancer risks) were evaluated over a lifetime of exposure (as a young child continuing into the adult years).

As detailed in Appendix C, consistent with Section § 130A-310.68 (b)(9) of House Bill 45 (also known as the Risk Bill), RLs were derived using the range of acceptable target cancer risk levels (10^{-6} to 10^{-4}).

5.3.1 Potential Receptors

The site is no longer used for manufacturing operations and physical assets have been dismantled and removed. Therefore, the following potential receptors considered for the soil RL derivation were based on the planned future land uses identified earlier in this report:

- ❑ Future North Carolina National Guard (Military Exercises and Training)
The NCNG personnel are potentially exposed to COPCs in surface soil during military exercises and training. The NCNG has identified the larger parking lot located near the former manufacturing area for training. The motorcycle and driving course would be designed using the parking lot and the looping roads around the plant site. The lot would also be used to stage significant events, such as large training exercises, staging of equipment and helibase functions. Temporary housing (Quonset huts), latrines and administration buildings are also proposed.
- ❑ Future DuPont State Recreational Forest Worker (Ranger Office/Visitor Center/Lake DERA Recreation Area Worker)
Future DSRF workers are potentially exposed to COPCs in surface soil. The DSRF staff has proposed a new Ranger Office, near the current entrance to the site off Staton Road. A worker may also be hired to assume daily operations of managed recreation at Lake DERA.
- ❑ Future On-Site Utility/Excavation Worker
The future on-site utility/excavation worker is potentially exposed to COPCs in surface soil and subsurface soil while repairing or installing sanitary sewer, electrical, water, or other utility lines at the site. For this receptor, it was conservatively assumed that exposure would occur each year during different repair or maintenance events.
- ❑ Future DuPont State Recreational Forest User (Adult/Child Trail User)
A variety of trails will be accessible to DSRF users. Trail users are potentially exposed to COPCs in soil. A multi-use trail is proposed in the Nature Preserve Primary Area. SWMUs and AOCs are not located in this area.

Following re-development, unrestricted use of the site will occur. Therefore, trespassers were not considered potential receptors. In addition, NCNG and DSRF staff will be present on site to coordinate NCNG's activities and security needs with permitted site uses.

Lake DERA surface water and sediment are not current media of concern and SWMUs and AOCs are not located near planned managed Lake DERA recreation areas to be used for the Wounded Warrior REHAB site. Therefore, these individuals are not considered

potential receptors at this time. This scenario will be revisited based on the findings of the final phase of the RFI.

5.3.2 Exposure Assumptions

Appendix C details the calculation of the RLs for the direct contact and inhalation pathways. The RL values were calculated using the assumptions summarized in Table 12. The assumptions are conservative (likely to overestimate actual exposure) but can be used for developing remediation standards. As shown in the tables, exposure assumptions were based on a combination of USEPA recommended⁴ values and professional judgment considering site-specific information. Rationale for selection of a portion of these exposure assumptions is provided below.

Soil Ingestion Rate

The soil ingestion rate refers to the amount of soil that is ingested daily due to incidental ingestion (e.g., hand-to-mouth contact). The USEPA recommended default soil ingestion rate of 100 milligrams per day (mg/day) (USEPA, 2014a) for outdoor workers was assumed for Future NCNG Users and Future DuPont State Recreational Forest Workers.

USEPA's recommended soil ingestion rate of 330 mg/day (USEPA, 2002) for construction workers was assumed for Future Utility/Excavation Workers. Similarly, USEPA recommended soil ingestion rates for adult and child residents (100 mg/day and 200 mg/day, respectively) were assumed for Future DuPont State Recreational Forest Users (Adult/Child Trail Users).

Exposed Skin Surface Area

Exposed skin surface area is relevant when evaluating uptake of chemicals that are absorbed dermally. USEPA default body surface areas (3,470 cm²) calculated for potential exposure to head, hands and forearms were used to evaluate Future NCNG Users, Future DuPont State Recreational Forest Workers and Future Utility/Excavation Workers (USEPA, 2014a).

USEPA-recommended body surface areas for adult and child residents (6,032 cm² and 2,690 cm²) were used to evaluate Future DuPont State Recreational Forest Users (Adult/Child Trail Users) (USEPA, 2014a).

Soil Adherence Rate

Dermal soil adherence is used, in conjunction with exposed skin surface area, to define the total amount of soil adhering to exposed skin surfaces. A soil adherence rate of 0.3 mg/cm² was used to evaluate Future NCNG Users and Future Utility/Excavation Workers. The value is based on the 95th percentile weighted adherence factor (AF) for construction workers (USEPA, 2004a) and is consistent with USEPA's recommendations for construction workers in USEPA's *Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites* (USEPA, 2002).

The USEPA-recommended soil adherence rate of 0.12 mg/cm² for industrial/commercial workers (USEPA, 2014a) was used to evaluate Future DuPont State Recreational Forest

⁴ The HWS Guidance recommends exposure assumptions consistent with EPA's Regional Screening Level Table (USEPA, 2014c).

Workers. This value is based on the arithmetic average of weighted mean of body part specific (hands, forearms, and face) mean adherence factors for adult commercial/industrial activities.

USEPA-recommended soil adherence rates for adult and child residents (0.07 mg/cm² and 0.2 mg/cm², respectively) were used to evaluate Future DuPont State Recreational Forest Users (Adult/Child Trail Users) (USEPA, 2014a).

Dermal Absorption

Dermal absorption values are used to estimate chemical absorption from soil through the skin (see Appendix C). Consistent with USEPA guidance (USEPA, 2004a), no default absorption values were applied to VOCs, as VOCs would tend to volatilize from soil on skin and are accounted for via the inhalation route. Similarly, USEPA recommends that the dermal pathway not be quantitated for inorganics without an available chemical-specific dermal absorption factor since the speciation of the compound is critical to the dermal absorption (USEPA, 2004a).

Fraction Contacted

SWMUs or AOCs are not located in the Nature Preserve Primary Area where the multi-use trail is planned. Therefore, it was assumed that a trail user would come into contact with COPCs in surface soil only a portion of the time present on site. A similar assumption was used for the Future Forest Ranger. It was assumed that workers in the Ranger Office would spend most of their time in the office or in portions of the site where trails or public use areas are located, the nature preserve primary area and proposed ranger office is not located near COPCs in surface soil.

Soil Exposure Frequency, Duration and Time

Exposure frequency refers to the number of days per year that an individual is exposed to site COPCs. Exposure duration refers to the number of years in which exposure occurs.

Future NCNG User

Typically, NCNG members are required to attend one drill weekend each month and one annual training period (usually 2 weeks in the summer) each year. Weekend drills usually consist of one Saturday and Sunday each month, but occasionally include reporting for duty on Friday night. Therefore, a site-specific exposure frequency of 3 days per month (for 11 months) plus 2 weeks per year (or 47 days/year) was assumed. An exposure time of 24 hours/day was assumed since overnight stays would occur. An exposure duration of 8 years was assumed, which is consistent with the minimum service obligation.

Future DuPont State Recreational Forest Worker

A site-specific exposure frequency of five days per week for nine months was assumed (or 180 days per year) for future DSRF workers. The exposure frequency assumes that limited soil contact would occur during the winter months (when the ground is covered with frost or is frozen for 3 months out of the year).

Future Utility/Excavation Workers

For on-site utility/excavation workers, it was assumed that a worker may come into contact with soil (surface and subsurface) during inspection and repair of utility lines for eight hours per day, two work weeks per year (or 10 days per year) for 25 years.

Future DuPont State Recreational Forest Users (Adult/Child Trail Users)

Based on professional judgment, conservative estimates of exposure time, frequency and duration were assumed for future trail users. It was assumed that potential receptors would visit the DSRF more frequently in the summer months (5 days per week) and less frequently in the spring and fall months (2 days per week). This value (108 days per year) is considered consistent with activity patterns discussed in the USEPA's *Exposure Factors Handbook* (USEPA, 2011) and the range of values recommended by other states and regions for recreational land use (such as Maine – 90 days per year and Virginia – 195 days per year).

An exposure time of 8 hour per day was assumed consistent with picnic pavilion rental periods.

5.3.3 Toxicity Values

Tables provided in Appendix C lists the numerical toxicity values that were used in the RL derivation. The values are reference doses (RfDs) or reference concentrations (RfCs) for systemic (noncancer) effects and slope factors (SFs) or unit risk factors (URFs) for cancer effects. In accordance with USEPA guidance (USEPA, 2003), toxicity values specific to the oral and inhalation pathways were obtained from EPA's Integrated Risk Information System (IRIS) online database (USEPA, 2014b). Where a toxicity value was not available in IRIS the following hierarchy of sources was reviewed to identify the most up-to-date toxicity information:

- ❑ Provisional toxicity values obtained from the USEPA Environmental Criteria and Assessment Office (ECAO) as reported in the USEPA's Regional Screening Level Table (USEPA, 2014c).
- ❑ Agency for Toxic Substances and Disease Registry (ATSDR) Minimal Risk Levels (MRLs) (ATSDR, 2013).
- ❑ California EPA toxicity values as cited in the USEPA's Regional Screening Level Table (USEPA, 2014c).
- ❑ Health Effects Assessment Summary Tables (HEAST) (USEPA, 1997)

Oral toxicity values used to evaluate dermal absorption were considered for adjustment in the RL derivation using the recommended criteria as found in the 2004 USEPA *Risk Assessment Guidance for Superfund, Volume I: Human Health Evaluation Manual (Part E, Supplemental Guidance for Dermal Risk Assessment)*. Following the guidance document, toxicity values are adjusted for gastrointestinal absorption only where chemical-specific gastrointestinal absorption values were less than 50%. The following site-specific constituents met this criterion: antimony, nickel, silver and vanadium.

Recommendations presented in the USEPA *Supplemental Guidance for Assessing Susceptibility from Early-Life Exposure to Carcinogens* (USEPA 2005a) were utilized in

the RL derivation. This guidance document recommends 10-fold and 3-fold adjustments in SFs to be combined with age-specific exposure estimates when estimating cancer risks from early life exposure (young children and adolescents) to carcinogens that act through a mutagenic mode of action (such as benzo[a]pyrene). Age-dependent adjustment factors (ADAFs) for child trail users are detailed in the Appendix C tables.

5.3.4 Direct Contact RL Summary

Table 13 provides a summary of the RLs calculated for each potential receptor. The lower of the non-carcinogenic and carcinogenic values is shown in the table for each analyte for each receptor. The minimum, or lowest, RL represents the trail user (adult/child) scenario or forest ranger scenario.

The site-specific direct contact RLs presented in the table should not be considered a “not-to-exceed” concentration, but rather consistent with USEPA guidance (USEPA, 2004b) are recommended to be implemented as an average concentration (such as a 95 percent upper confidence limit of the mean [UCL₉₅]) during remedial action.

Table 14 provides a comparison of historical RFI surface soil data to the RL range. As shown in the table, only one COPC (7,12-dimethylbenz(a)anthracene) had a UCL above the upper end of the RLs based on a HQ=1 and a target risk of 1×10^{-6} range. The COPC exceedance was observed in one surface soil sample location collected at AOC A (Fuel Oil Tank Farm). No detections were noted above the RLs based on a HQ=1 and a target risk of 1×10^{-4} . Additional surface soil sampling is planned at AOC A and other site areas during the final phase of the RFI.

6.0 Summary

A summary of the site-specific soil and groundwater RL values derived for protection of human health and the environment is provided on the following pages and in Table 15. Included in the summary are:

- Site-specific groundwater RLs,
- Site-specific soil RLs protective of the soil migration to groundwater pathway, and
- Site-specific direct contact soil RLs. The direct contact soil RLs are presented as a range (minimum and maximum) for each COPC identified in surface and subsurface soils. The minimum and maximum values are derived from the evaluation of specific receptors using the acceptable target cancer risk levels (10^{-6} to 10^{-4}) and a target HQ of 1, where the lower of the non-carcinogenic or carcinogenic value is the RL. For surface soils, potential receptors are: Forest Ranger, National Guard, Utility Worker, Trail User (Adult/Child). For subsurface soils, a Utility Worker is the only potential receptor. The full list of values for individual receptors at a HQ of 1 and risk levels of 10^{-6} , 10^{-5} , and 10^{-4} is provided in Table 13.

As noted earlier, the RLs will be used to support the remedial approach for the site. Additional sampling activities are planned during the final phase of the RFI. These RLs will be used to evaluate the data collected during the investigation and provide information to support remedial-decision making based on planned future land uses.

- 1 - Groundwater RLs calculations are detailed in Table 5.
- 2 - RLs for protection of migration to groundwater are calculated in Table 10.
- 3 - RL shown is the minimum RL from the RLs calculated for each of the four receptors (Forest Ranger, National Guard User, Utility Worker or Trail User) evaluated for the endpoint indicated (target risk and HQ).
RLs are presented for each receptor in Table 13.
- 4 - RL shown is the maximum RL from the RLs calculated for each of the four receptors (Forest Ranger, National Guard User, Utility Worker or Trail User) evaluated for the endpoint indicated (target risk and HQ).
RLs are presented for each receptor in Table 13.
- 5 - RL shown is the RL calculated for the utility worker for the endpoint indicated (target risk and HQ).
RLs are presented for each receptor in Table 13.

* - A non-risk-based "ceiling limit" concentration of 10⁵ mg/kg
 HQ = Hazard Quotient
 mg/kg - milligrams per kilogram
 c - carcinogen
 n - non-carcinogen

ug/L - micrograms per liter

mg/L - milligrams per liter

Notes:

1 - Constituents detected in surficial aquifer monitoring wells during RFI and CAMU sampling between 2007 and 2013. Field duplicates included in statistical summary.

2 - Sources of screening criteria:

NC 2L - North Carolina 2L Drinking Water Standard 15A NCAC 2L (April 2013)

NC IMAC - North Carolina Interim Maximum Allowable Concentration (April 2013)

3 - COPC Notes

LFD - Low frequency of detection (<5%) and not a site-related constituents or breakdown product of a site-related constituent

Draft

Indicates exceedance of a screening level.

ug/L - micrograms per liter

mg/L - milligrams per liter

Draft

Notes:

1 - Constituents detected in bedrock monitoring wells during the Phase III RFI (2009). Field duplicates included in statistical summary.

2 - Sources of screening criteria:

NC 2L - North Carolina 2L Drinking Water Standard 15A NCAC 2L (April 2013)

NC IMAC - North Carolina Interim Maximum Allowable Concentration (April 2013)

Indicates exceedance of a screening level.

COPC = Constituent of Potential Concern
CAS = Chemical Abstracts Service
MW = molecular weight
g/mole = Grams per mole
ACL = Alternate Concentration Limit

mg/L = milligrams per liter
L/kg = liters per kilogram
atm-m³/mole =
Koc = partition coefficient
Kd = distribution coefficient

HH - human health
AQ - aquatic
ND - Not detected
NE - Not established

Draft

Table 5
Proposed ACLs
Former DuPont Brevard Facility
Cedar Mountain, NC

Notes:

- 1 - Constituents identified as COPCs in Tables 1-3.
- 2 - Values obtained from USEPA Regional Screening Level Table, November 2013
- Highly soluble ($S > 100$ mg/L), highly volatile (Henry's law constant $> 10^{-3}$ atm-m³/mol), highly sorptive ($\log K_{oc} > 3$)
- 3 - K_d values obtained from Risk Assessment Information System (RAIS), Constituents with $K_d > 10$ are highly sorptive.
- 4 - Bioconcentration Factor (BCF) values obtained from RAIS. Values less than 100 L/kg have low potential for bioaccumulation.
- 5 - Volatilization half-lives based on a model river, obtained from EPISUITE. Constituents with half-lives < 5 days are considered highly biodegradable.
- 6 - North Carolina Surface Water Standards found in 15A NCAC 02B.0208 for protection of human health (organism only)
 - Little River is a Class C water and is not used as a water supply.
 - In the absence of fish consumption values, the following secondary screening levels were utilized:
 - DuPont -Where NC 2B for HH-org were unavailable, then a surface water standard (SS) was derived consistent with 15A NCAC 02B.0208 for protection of human health (fish consumption).
 - MCL - Federal Maximum Contaminant Levels (Summer 2010)
 - NC 2L - North Carolina 2L Drinking Water Standard 15A NCAC 2L (April 2013)
 - NC IMAC - North Carolina Interim Maximum Allowable Concentration (April 2013)
- 7 - North Carolina Surface Water Standards found in 15A NCAC 02B.0208 for protection of aquatic life and trout waters
 - In the absence of chronic values, the following ecological surface water benchmarks were utilized:
 - Tier II Secondary Chronic Value (SCV) - Suter, G.W. II, and Tsao, C.L. 1996. Toxicological Benchmarks for Screening Potential Contaminants of Concern for Effects on Aquatic Biota
 - EPA Region III - Freshwater Ecological Screening Benchmark
 - EPA Region V - Surface Water Ecological Screening Level
 - NAWQC - National Recommended Water Quality Criteria (2009) for protection of aquatic life (freshwater chronic).
 - DuPont - DuPont-derived effects threshold concentration
- 8 - Lower of the values for protection of human health (fish consumption or secondary screening levels, where fish values not available) and protection of aquatic life (chronic values or secondary screening levels, where 2B values not available)
- 9 - Proposed ACL is the limiting water quality criterion with an applied attenuation factor of 500; with the exception of values in excess of solubility, which are set at the solubility limit.
- 10 - Surficial and bedrock aquifer perimeter monitoring wells (BR-1, BR-3, BR-5, BR-9, BR-11, MW104A/B, MW105, MW106A/B, MW107A/B, MW108, MW111A/B, MW112A/B, MW207A/B, MW210A/B, MW213, MW214, MW215, MW301A/B, MW302A/B, R87-S8, R87-S9 and R87-S10) .

ug/L - micrograms per liter
mg/L - milligrams per liter

B - Not detected substantially above the level reported in the laboratory or fieldblanks.
J - Analyte present. Reported value may not be accurate or precise.
UJ - Not detected. Reporting limit may not be accurate or precise.

Draft

1 - Groundwater COPCs detected in Little River and DERA Creek Tributary between 2009 and 2013 during RFI and CAMU sampling.
2 - North Carolina Surface Water Standards found in 15A NCAC 02B.0208 for protection of human health (organism only) and aquatic life
Little River is a Class C water and is not used as a water supply.
() indicates source of secondary value. See Table 5.

[] and Yellow Shading indicates an exceedance of screening criteria

Draft

Notes:

- 1 - Constituents detected in surface soil (defined as less than 2 feet bgs). Field duplicates included in statistical summary.
- 2 - Site-specific background concentrations presented in Phase III RFI Report.
- DL - background value is the detection limit*
- 3 - NCDENR Inactive Hazardous Site Branch Preliminary Soils Remediation Goals (January 2014)
- Value for chromium is trivalent chromium.*
- Value for diphenyl ether is DuPont-derived value.*

Indicates exceedance of a screening level and site-specific background (for inorganics).

Table 8
Constituents of Potential Concern in Subsurface Soil
Former DuPont Brevard Facility
Cedar Mountain, NC

Draft

ug/kg - micrograms per kilogram

mg/kg - milligrams per kilogram

Notes:

1 - Constituents detected in subsurface soil and waste (defined as greater than 2 feet bgs). Field duplicates included in statistical summary.

2 - Site-specific background concentrations presented in Phase III RFI Report.

DL - background value is the detection limit

3 - NCDENR Inactive Hazardous Site Branch Preliminary Soils Remediation Goals (January 2014)

Value for chromium is trivalent chromium.

Value for diphenyl ether is DuPont-derived value.

Indicates exceedance of a screening level and site-specific background (for inorganics).

Notes:

1 - COPCs in surface and subsurface soil identified in Tables 7 and 8. Groundwater COPCs detailed in Tables 1 - 3. NCDENR Inactive Hazardous Site Branch Preliminary Soils Remediation Goals (PSRGs) (January 2014)

2 - Antimony and vanadium not identified as COPCs for groundwater migration. Antimony not a COPC in groundwater. Vanadium does not exceed PSRGs in subsurface soil or waste.

Indicates COPC for RL Derivation

Table 10
RL for Protection of Migration to Groundwater
Former DuPont Brevard Facility
Cedar Mountain, NC

Soil Screening Level Partitioning Equation for Migration to Groundwater

$$RL \text{ (mg/kg)} = C_w * \left[K_{oc} f_{oc} + \frac{\Theta_w + \Theta_a H'}{P_b} \right]$$

NC DENR, 2013 - Equation 1

Parameter	Definition	Value	Source
RL	Remedial Level for protection of migration to groundwater (mg/kg)		NC DENR, 2013
C_w	Target soil leachate concentration (mg/L)	Calculated	
where	$C_w = ACL \times DAF$		
SL	Target soil leachate concentration (mg/L)	Chemical-Specific	ACL
DAF	Dilution Attenuation Factor, unitless	20	0.5-acre source default
K_{oc}	Organic carbon partition coefficient (L/kg)	Chemical-Specific	See Below
f_{oc}	Fraction of organic carbon (g/g)	0.001	Default
Q_w	Water-filled soil porosity (L_{water}/L_{soil})	0.3	Default
Q_a	Air-filled soil porosity (L_{pore}/L_{soil})	0.13	Default
H'	Henry's Law Constant (dimensionless)	Chemical-Specific	See Below
P_b	Dry Soil Bulk Density (kg/L)	1.5	Default

COPC	Koc	H'	ACL (mg/L)	Cw (mg/L)	RL (mg/kg)
1,1,2,2-Tetrachloroethane	94.94	0.0150103	2.00E+00	4.00E+01	1.18E+01

AT Averaging Time (days) (10)						
	Noncarcinogenic, ED x 365 d/yr	2,920	9,125	9,125	7,300	2,190
	Carcinogenic, 70 yr x 365d/yr	25,550	25,550	25,550	25,550	25,550

Table 12
Exposure Assumptions
Former DuPont Brevard Facility
Cedar Mountain, NC

Notes:

- (1) Soil ingestion rate: USEPA recommended values for outdoor worker and construction worker (Exhibit 1-2, USEPA, 2002). USEPA's recommended total daily soil intake value for residential exposures was conservatively assumed for a trail users (USEPA, 2014b)
- (2) Age-adjusted rates were utilized to evaluate combined recreational exposure to carcinogens (USEPA, 1991) and mutagens (USEPA, 2005). Equations consistent with EPA's Regional Screening Level Table User's Guide were used (USEPA, 2014a).
- (3) It was assumed that workers in the Ranger Office would spend most of their time in the office or in portions of the site where trails or public use areas are located, the nature preserve primary area and proposed ranger office is not located near COPCs in surface soil.
- (4) Adherence Factor: USEPA recommended default values (USEPA, 2014b), worker value represents 95th percentile for high-end soil activity. USEPA recommended value for resident assumed for trail users.
- (5) Chemical specific values obtained from Exhibit 3-4 in USEPA 2004. Default values are not available for VOCs and inorganic compound classes.
- (6) Particulate Emission Factor or Volatilization Factor: USEPA default value PEF used for non-volatile compounds or chemical-specific VF used for volatile compounds (USEPA, 2014a).
- (7) Skin Surface Area: EPA recommended value for workers (USEPA, 2014b) assumed for National Guard and workers. EPA recommended value for residents (USEPA, 2014b) assumed for trail users.
- (8) Exposure Frequency, Time and Duration: For the National Guard, a site-specific exposure frequency of 3 days per month (for 11 months) plus 2 weeks per year (or 47 days/year) was assumed based on required weekend drill training and one annual training period. An exposure time of 24 hours/day was assumed since overnight stays would occur. An exposure duration of 8 years was assumed, which is consistent with the minimum service obligation. Ranger - a site-specific exposure frequency of 5 days per week for 9 months was assumed (or 180 days per year). Exposure time and duration consistent with USEPA-recommended values was used (8 hours/day, 25 years). Trail Users - It was assumed that trail users would visit the site 5 days/week during the 3 summer months (June, July, August) and less frequently (2 days/ week) during the Spring and Fall months (6 months), which results in 108 days/year. Recommended exposure duration for residents was used for the trail user (USEPA, 2014b).
- (9) Body weight: USEPA recommended value for adult and child receptors (USEPA, 2014b).
- (10) Averaging time: Noncarcinogens = ED expressed in days. Carcinogens = 70-year lifetime expressed in days.

- 1 - Groundwater RLs calculations are detailed in Table 5.
- 2 - RLs for protection of migration to groundwater are calculated in Table 10.
- 3 - RL shown is the minimum RL from the RLs calculated for each of the four receptors (Forest Ranger, National Guard User, Utility Worker or Trail User) evaluated for the endpoint indicated (target risk and HQ). RLs are presented for each receptor in Table 13.
- 4 - RL shown is the maximum RL from the RLs calculated for each of the four receptors (Forest Ranger, National Guard User, Utility Worker or Trail User) evaluated for the endpoint indicated (target risk and HQ). RLs are presented for each receptor in Table 13.
- 5 - RL shown is the RL calculated for the utility worker for the endpoint indicated (target risk and HQ). RLs are presented for each receptor in Table 13.

* - A non-risk-based "ceiling limit" concentration of 10⁵ mg/kg
HQ = Hazard Quotient
mg/kg - milligrams per kilogram
c - carcinogen
n - non-carcinogen

Draft

Figures

DRAFT

* Potential receptors based on NC Department of Agriculture February 25, 2014 memorandum titled *Proposed North Carolina National Guard (NCNG) and North Carolina Forest Service (NCFS) uses on the DuPont Corporation Property*. Potential groundwater exposure pathways consider installation of a well in the bedrock aquifer for potable and non-potable use.

Appendices

DRAFT

**Appendix A
Future Land Use Plan**

Opportunities in DuPont Region

Mission Statement :

On order, the North Carolina National Guard's Always Ready-Ready Team deploys military capabilities, in support of State and/or National authorities, in order to protect the lives and properties of fellow Citizens, defend the State and Nation, and secure our American way of life.

NCNG could use the DuPont site to facilitate the training for Military and Civilian Support.

Proposed timeline and activities

Within six months

- Dismounted Military Training
- Military Vehicle Training
- Motor Cycle Operators Course
- Land Navigation Course
- Bivouac Training
- Engineers Training
- Leaders Reaction Course
- Helicopter Aquatic Rescue Training
- Mountain Operations

Within one Year :

Military Usage

- Obstacle Course
- Un-Manned Aerial System Training Area
- Short-term stays with lodging

Morale and Recreation site

- Primitive Camping
- Water Recreation on the DuPont Lake
- Designated Fishing Areas

Two Years and Beyond:

- Partner with Veterans Groups and Air Guard , establishing permanent camp sites, Wounded Warrior REHAB site
- Small Arms Range
- NG Mobile Training Team, National Site
- NG Civil Support Center of Excellent
- Permanent Lodging/ Admin facilities to support training

NCNG

The NCNG is able to utilize the DuPont "doughnut hole" beginning within 6 months, and has a vision to expand both training and recreational opportunities well into the future. In order for the area to be fully utilized, the NCNG along with other State Agencies must partner and develop dual use facilities to foster efficiency.

Potential State and Federal Partners Utilizing DuPont and the Headwaters

- North Carolina National Guard
- NC Emergency Management
- NC Highway Patrol
- NC Department of Public Safety
- NC Forest Service
- U.S. Special forces Command
- U.S. Army ROTC
-

ARMY ROTC

Motorcycle Safety Course

Paved Airstrip could facilitate C-130 and UAS

Recreation Area

Drivers Training Course

Helicopter Landing Site

Land Navigation Course

Antimony	4.06E+02
Cobalt	3.04E+02
Silver	5.07E+03
Thallium	1.01E+01
Vanadium	5.06E+03
3-Methylcholanthrene	7.02E+00
7,12-Dimethylbenz[A]Anthracene	5.79E-01
Benzo(a)anthracene	1.98E+02
Benzo(b)fluoranthene	1.98E+02
Benzo(k)fluoranthene	1.98E+03
Benzo(a)pyrene	1.98E+01
Biphenyl	1.99E+03
Chrysene	1.98E+04
Dibenz(a,h)anthracene	1.98E+01
Indeno(1,2,3-cd)pyrene	1.98E+02
Naphthalene	4.32E+03

Vanadium RfD is based on the RfD for vanadium pentoxide adjusted as described in the EPA Regional Screening Level Table User's Guide.

Particulate Emission Factor or Volatilization Factor: USEPA default value PEF used for non-volatile compounds or chemical-specific VF used for volatile compounds (USEPA, 2014).

**APPENDIX D

Notes:
1 - Constituents detected in CAMU monitoring wells during 2H2014 monitoring event.
Field duplicates included in statistical summary.
2 - Sources of screening criteria:
NC 2L - North Carolina 2L Drinking Water Standard 15A NCAC 2L (April 2013)
NC IMAC - North Carolina Interim Maximum Allowable Concentration (April 2013)

Indicates exceedance of a screening level.

Total Suspended Solids	C009	N	UG/L					37600		<1000		

B - Not detected substantially above the level reported in the laboratory or fieldblanks.

J - Analyte present. Reported value may not be accurate or precise.

UJ - Not detected. Reporting limit may not be accurate or precise.

North Carolina Surface Water Standards found in 15A NCAC 02B.0208 for protection of human health
 (organism only) and aquatic life

Little River is a Class C water and is not used as a water supply.

Indicates exceedance of a screening level.

Notice: This form and any information attached to it are "Public Records" as defined in NC General Statute 132-1. As such, these documents are available for inspection and examination by any person upon request (NC General Statute 132-6).

Instructions:

- **Prepare one form for each individually monitored unit.**
- **Please type or print legibly.**
- Attach a notification table with values that attain or exceed NC 2L groundwater standards or NC 2B surface water standards. The notification must include a preliminary analysis of the cause and significance of each value. (e.g. naturally occurring, off-site source, pre-existing condition, etc.).
- Attach a notification table of any groundwater or surface water values that equal or exceed the reporting limits.
- Attach a notification table of any methane gas values that attain or exceed explosive gas levels. This includes any structures on or nearby the facility (NCAC 13B .1629 (4)(a)(i)).
- Send the original signed and sealed form, any tables, and Electronic Data Deliverable to: Compliance Unit, NCDENR-DWM, Solid Waste Section, 1646 Mail Service Center, Raleigh, NC 27699-1646.

Solid Waste Monitoring Data Submittal Information

Name of entity submitting data (laboratory, consultant, facility owner):

Parsons - Environment and Infrastructure

Contact for questions about data formatting. Include data preparer's name, telephone number and E-mail address:

Name: Tracy Ovbey Phone: 704-558-4403
 E-mail: tracy.ovbey@parsons.com

Facility name:	Facility Address:	Facility Permit #	NC Landfill Rule: (.0500 or .1600)	Actual sampling dates (e.g., October 20-24, 2006)
DuPont Brevard Facility	Staton Road Cedar Mountain, North Carolina	NCD 003 152 329		October and November 2014

Environmental Status: (Check all that apply)

- Initial/Background Monitoring Detection Monitoring Assessment Monitoring Corrective Action

Type of data submitted: (Check all that apply)

- Groundwater monitoring data from monitoring wells Methane gas monitoring data
 Groundwater monitoring data from private water supply wells Corrective action data (specify) _____
 Leachate monitoring data Other(specify) _____
 Surface water monitoring data

Notification attached?

- No. No groundwater or surface water standards were exceeded.
 Yes, a notification of values exceeding a groundwater or surface water standard is attached. It includes a list of groundwater and surface water monitoring points, dates, analytical values, NC 2L groundwater standard, NC 2B surface water standard or NC Solid Waste GWPS and preliminary analysis of the cause and significance of any concentration.
 Yes, a notification of values exceeding an explosive methane gas limit is attached. It includes the methane monitoring points, dates, sample values and explosive methane gas limits.

Certification

To the best of my knowledge, the information reported and statements made on this data submittal and attachments are true and correct. Furthermore, I have attached complete notification of any sampling values meeting or exceeding groundwater standards or explosive gas levels, and a preliminary analysis of the cause and significance of concentrations exceeding groundwater standards. I am aware that there are significant penalties for making any false statement, representation, or certification including the possibility of a fine and imprisonment.

Sampling Date **October 30, 2014 and November 10-12, 2014**

Analytical Protocol

<u>Laboratory</u>	<u>Analytical Method</u>	<u>Parameter(s)</u>
Eurofins Lancaster	SW846 6010C/6020A/7470A	Metals
Eurofins Lancaster	SW846 8260B SIM	Vinyl Chloride
Eurofins Lancaster	SW8468260B	Volatiles (25 ml purge)/Acrylonitrile
Eurofins Lancaster	SW846 8270D SIM	PAHs
Eurofins Lancaster	SW846 8270D	SVOCs/Library Search: 2,5-Dimethyl furan
Eurofins Lancaster	SW846 8015B	Glycols

Sample Receipt

The following items are noted for this data set:

- All samples were received Eurofins Lancaster Laboratories in satisfactory condition on October 31, and November 12-13, 2014. The cooler temperatures were as follows: 0.6, 0.4, 0.4, 0.3, 0.9, 0.2, 0.2, 0.4, 0.4, 2.2, 0.4, 0.3, and 1.6 degrees C. The ADQM chemist doesn't believe the data to be impacted since the samples were cold but not frozen upon receipt.
- The following sample id discrepancies were noted however the samples were logged in as indicated on the COC:
 - SSP14-SW-07 and SSP14-SW-27 Glycol vials were received empty.
 - GW2H14-R87-S10 metals aliquot was received in a plastic 500 ml container.
 - EB- sample ids were missing (rubbed off) from the sample container.

Data Review

One hundred percent of the electronic data submitted for this project was reviewed via the automated DuPont Data Review (DDR) process. Overall the data is acceptable for use without qualification as reported by Eurofins Laboratories, with the exception of the nine metals and three hardness results flagged "B" due to equipment or method blank contamination. 2, 5-Dimethylfuran (Targeted TIC) was not detected and therefore was flagged "UJ", estimated. One Mercury, 7470A, and three Silver, 6010C, non-detect results were flagged "UJ", estimated, due to low Relative Percent Recovery, RPR, between the MS/MSD. Results detected between the method detection limit (MDL) and practical quantitation limit (PQL) were qualified "J" estimated. The DuPont Data Review (DDR) Narrative Report, which follows this cover letter, lists the samples that were qualified, the specific reasons for qualification, and potential bias in reported results.

DuPont Data Review (DDR)

The DDR is an internal review process used by the ADQM group to assist with the determination of data usability. The electronic data deliverables received from the laboratory are loaded into the Locus EIM™ database and processed through a series of data quality checks, which are a combination of software (Locus EIM™ database Data Validation Module (DVM)) and manual reviewer evaluations. The data is evaluated against the following data usability checks:

- Field and laboratory blank contamination
- US EPA hold time criteria
- Missing Quality Control (QC) samples
- Matrix spike(MS)/matrix spike duplicate (MSD) recoveries and the relative percent differences (RPDs) between these spikes
- Laboratory control sample(LCS)/control sample duplicate (LCSD) recoveries and the RPD between these spikes
- Surrogate spike recoveries for organic analyses
- RPD between field duplicate sample pairs
- RPD between laboratory replicates for inorganic analyses
- Difference / percent difference between total and dissolved sample pairs.

The DDR applies the following data evaluation qualifiers to analysis results, as warranted:

Qualifier	Definition
B	Not detected substantially above the level reported in the laboratory or field blanks.
R	Unusable result. Analyte may or may not be present in the sample.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected. Reporting limit may not be accurate or precise.

Please refer to the laboratory report for a description of the lab qualifiers.

DVM Narrative Report

Site: Brevard

Sampling Program: GW2H14 CAMU

Validation Options: LABSTATS

Validation Reason Code: Contamination detected in equipment blank(s). Sample result does not differ significantly from the analyte concentration detected in the associated equipment blank(s).

Field Sample ID	Date Sampled	Lab Sample ID	Analyte	Result	Units	Type	MDL	PQL	Validation Qualifier	Analytical Method	Pre-prep	Prep
GW2H14-SW-5	10/30/2014	7658013	Total Hardness As CaCO3	8.6	MG/L	MDL	0.033	0.40	B	2340 B-1997

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/12/14 at 02:10 PM

Group Number: 1515243

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m³	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/25/14 at 10:42 AM

Group Number: 1518095

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Samples Intact:	Yes	Air Quality Samples Present:	No
Missing Samples:	No		
Extra Samples:	No		
Discrepancy in Container Qty on COC:	No		

Trip Blank Type(s): 2-HCl, 1-Unpreserved

Unpacked by Patrick Engle (3472) at 18:38 on 11/12/2014

Samples Chilled Details: ISM 2014

Thermometer Types: *DT = Digital (Temp. Bottle)* *IR = Infrared (Surface Temp)* All Temperatures in °C.

Cooler #	Thermometer ID	Corrected Temp	Therm. Type	Ice Type	Ice Present?	Ice Container	Elevated Temp?
1	DT121	0.4	DT	Wet	Y	Loose	N
2	DT121	2.2	DT	Wet	Y	Loose	N
3	DT121	0.4	DT	Wet	Y	Loose	N

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m³	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: CRG-E.I.DuPont de Nemours & Co
Reported: 11/25/14 at 03:50 PM

Group Number: 1518404

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Samples Intact:	Yes	Air Quality Samples Present:	No
Missing Samples:	No		
Extra Samples:	No		
Discrepancy in Container Qty on COC:	No		

Trip Blank Type(s): 6-HCL 3-unpres

Unpacked by Brandy Barclay (2299) at 10:30 on 11/13/2014

Samples Chilled Details

Thermometer Types: *DT = Digital (Temp. Bottle) IR = Infrared (Surface Temp) All Temperatures in °C.*

Cooler #	Thermometer ID	Corrected Temp	Therm. Type	Ice Type	Ice Present?	Ice Container	Elevated Temp?
1	DT146	0.3	DT	Wet	Y	Loose	N
2	8013596-IR	1.6	IR	Wet	Y	Loose	N

General Comments: GW2H14-R87-S10 metals bottle = 500ml plastic
 EB- ID's were rubbered off labels

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	BMQL	Below Minimum Quantitation Level
N.D.	none detected	MPN	Most Probable Number
TNTC	Too Numerous To Count	CP Units	cobalt-chloroplatinate units
IU	International Units	NTU	nephelometric turbidity units
umhos/cm	micromhos/cm	ng	nanogram(s)
C	degrees Celsius	F	degrees Fahrenheit
meq	milliequivalents	lb.	pound(s)
g	gram(s)	kg	kilogram(s)
µg	microgram(s)	mg	milligram(s)
mL	milliliter(s)	L	liter(s)
m³	cubic meter(s)	µL	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Data Qualifiers:

C – result confirmed by reanalysis.

J - estimated value – The result is \geq the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

Inorganic Qualifiers

A	TIC is a possible aldol-condensation product	B	Value is $<$ CRDL, but \geq IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike sample not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
N	Presumptive evidence of a compound (TICs only)	U	Compound was not detected
P	Concentration difference between primary and confirmation columns $>$ 25%	W	Post digestion spike out of control limits
U	Compound was not detected	*	Duplicate analysis not within control limits
X,Y,Z	Defined in case narrative	+	Correlation coefficient for MSA $<$ 0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

			Date Sampled	08/03/2004	07/07/2004	07/09/2004	07/23/2004	07/23/2004
			Start Depth - End Depth	8 - 12	8 - 12	16 - 20	0 - 4	0 - 4
			Sample Purpose	FS	FS	FS	FS	FS
Bis(2-Chloroisopropyl)Ether	39638-32-9	MG/KG		<0.0390	<0.0390	<0.0400		
Bis(2-Chloroethoxy)Methane	111-91-1	MG/KG		<0.0390	<0.0390	<0.0400		
Bis(2-Chloroethyl)Ether	111-44-4	MG/KG		<0.0390	<0.0390	<0.0400		
Bis(2-Ethylhexyl)Phthalate	117-81-7	MG/KG		<0.1200	<0.1200	<0.1200		
Butyl Benzyl Phthalate	85-68-7	MG/KG		<0.0790	<0.0770	<0.0800		
Carbazole	86-74-8	MG/KG		<0.0390	<0.0390	<0.0400		
Chlorobenzilate	510-15-6	MG/KG		<0.0390	<0.0390	<0.0400		
Chrysene	218-01-9	MG/KG		<0.0390	<0.0390	<0.0400		
Diallate	2303-16-4	MG/KG		<0.0390	<0.0390	<0.0400		
Dibenz(A,H)Anthracene	53-70-3	MG/KG		<0.0390	<0.0390	<0.0400		
Dibenzofuran	132-64-9	MG/KG		<0.0390	<0.0390	<0.0400		
Diethyl Phthalate	84-66-2	MG/KG		<0.0790	<0.0770	<0.0800		
Dimethyl Phthalate	131-11-3	MG/KG		<0.0790	<0.0770	<0.0800		
Di-N-Butyl Phthalate	84-74-2	MG/KG		<0.0790	<0.0770	<0.0800		
Ethyl Methanesulfonate	62-50-0	MG/KG		<0.0790	<0.0770	<0.0800		
Fluoranthene	206-44-0	MG/KG		<0.0390	<0.0390	<0.0400		
Fluorene	86-73-7	MG/KG		<0.0390	<0.0390	<0.0400		
Hexachlorobenzene	118-74-1	MG/KG		<0.0390	<0.0390	<0.0400		
Hexachlorobutadiene	87-68-3	MG/KG		<0.0790	<0.0770	<0.0800		
Hexachlorocyclopentadiene	77-47-4	MG/KG		<0.2000	<0.1900	<0.2000		
Hexachloroethane	67-72-1	MG/KG		<0.0390	<0.0390	<0.0400
