CFa	Conversion Factor, air (ug/mg)	1.E-03	1.E-03
BW	Body Weight - (kg) (9)	80	15
AT	Averaging Time (days) (10)		
	Noncarcinogenic, ED x 365 d/yr	7,300	2,190
	Carcinogenic, 70 yr x 365d/yr	25,550	25,550

**Recreational Screening Level
Exposure Assumptions**
Former DuPont Brevard Facility
Cedar Mountain, NC

Notes:

- (1) Soil ingestion rate: USEPA's recommended total daily soil intake value for residential exposures was conservatively assumed for a trail users (USEPA, 2014).
- (2) Age-adjusted rates were utilized to evaluate combined recreational exposure to carcinogens (USEPA, 1991) and mutagens (USEPA, 2005). Equations consistent with EPA's Regional Screening Level Table User's Guide were used (USEPA, 2015).
- (3) No adjustment to fraction contacted was made.
- (4) Adherence Factor: Sediment value based on mean value for reed gatherers in EPA, 2004: Exhibit 3-3
USEPA recommended value for resident assumed for child lake user.
- (5) Chemical specific values obtained from Exhibit 3-4 in USEPA 2004. Default values are not available for VOCs and inorganic compound classes.
- (6) Particulate Emission Factor or Volatilization Factor: USEPA default value PEF used for non-volatile compounds or chemical-specific VF used for volatile compounds (USEPA, 2015).
- (7) Skin Surface Area: EPA recommended value for residents (USEPA, 2014).
EPA recommended value for residents (USEPA, 2014) assumed for trail users.
- (8) Exposure Frequency, Time and Duration: It was assumed that trail users would visit the site 5 days/week during the 3 summer months (June, July, August) and less frequently (2 days/ week) during the Spring and Fall months (6 months), which results in 108 days/year. Recommended exposure duration for residents was used for the trail user (USEPA, 2014).
- (9) Body weight: USEPA recommended value for adult and child receptors (USEPA, 2014).
- (10) Averaging time: Noncarcinogens = ED expressed in days. Carcinogens = 70-year lifetime expressed in days.
